The classification accuracy of the sEMG system was based on the 13 features extracted from a 100 ms window without overlap (see Section 4.1). The cross-trial evaluation accuracies of the sEMG system of using longer windows, which were 150 ms with 50 ms overlap, 200 ms with 100 ms overlap, 250 ms with 150 ms overlap, and 300 ms with 200 ms overlap, respectively, were also explored. In addition ...

Background and objective The Atlanta classification of acute pancreatitis enabled standardised reporting of research and aided communication between clinicians. Deficiencies identified and improved understanding of the disease make a revision necessary. Methods A web-based consultation was undertaken in 2007 to ensure wide participation of pancreatologists.
